

Description

MOWERS

Corner Machinery Ltd. is used for mowing lawns.

The structure of this machine provides necessary height of mowing. Mowing width, which is done by this mowers, provides producing direct selecting of slightly dried green mass by rolled pressing on silage without additional operations like tedding and raking up.

Advantages of the mowers Corner machinery Ltd.:

- Simple structure of mowers;
- Low usage of tractor's power;
- High quality of the cutting blade of Corner machinery Ltd.;
- Simple and quick blade change;
- Ability to choose mowers; i.e., to shift mowers from transporting position to working position mechanically or hydraulically.

Fingered Mower is used for mowing wild grasses. Beams and bars of cutting tool machines are safer than other similar mowers of different producers. So, that's why it eliminates the possibility of deformation or destruction during work and collection of cutted piles on it.

Disk Mowers is used for mowing natural and planted grass. Also, it's used for mowing high-yield and the crops in the swath. The mowers are used in all areas like flat tracts of land (hayraking) not clogged by stones but except highlands

TECHNICAL FEATURES

	CM-1183	CM-1184	CM-1186	CM-1185	CM-1187
Number of discs	4	5	6	5	6
Number of blades for disc	2	2	2	2	2
Working Width / mm	1800	2050	2400	2050	2400
Shaft Rotations / min-l	540	540	540	540	540
Disc Speed / m/s	78,6	78,6	78,6	78,6	78,6
Weight / kg	330	370	410	700	750
Tractor Power / Hp	45	55	70	70	80

**CM-1185 and CM-1187 compression model*
