

## Description

Land rollers of Corner Machinery Ltd. are designed for preplanting and afterplanting of compacting soil, milling the surface of soil's crust and partial aligning of cultivated field. correct in the front and the next planting soil deposit, the surface of the earth crust breaking and plowed fields used for the partial plane.

Land Roller is required working part of all marks of seed drills.

Construction of land rollers Corner Machinery Ltd.provides copying the surface of the soil in the best way.

### **Mechanical rollers**

The use of land roller provides to form on 3-4 sm depth the packed layer with fine grained structure and left larger lumps above.

Excellent seedbed formed by this way is helping to save a moisture in the soil because that packed layer will collect both moisture from the above and below and guarantee fast and friendly seedling.

Moreover, that acceptance provides better fixation of seeds and its contact with soil, in the result plants become more viable.
